

Technical Data Sheet

iF488 Anti-Mouse CD16/32

Catalog Number: 201809, 201810

Size: 25 tests, 100 tests

Target Name: CD16/32

Regulatory Status: RUO

Product Details

Clone: 2.4G2

Application: FC

Reactivity: Mouse

Format: iF488

Isotype: Rat IgG2b

Antibody Type: Monoclonal

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA

Protein Concentration: Supplied at a lot-specific concentration.

Storage&Handling: The antibody solution should be stored undiluted between 2°C and 8°C, and protected from prolonged exposure to light. Do not freeze.

Recommended Usage: For flow cytometric staining, it is recommended to use 5 uL of this reagent per 0.5-1.0 million cells in a 100 μ L volume. Optimal reagent performance should be determined by titration for each specific application.

Excitation Laser: Blue Laser (488 nm)

Background Information

CD16/32 are Fc-gamma receptors (Fc γ Rs) expressed on a variety of immune cells, including B cells, monocytes/macrophages, NK cells, granulocytes, mast cells, and dendritic cells. CD16 corresponds to the low-affinity Fc receptor III (Fc γ RIII), while CD32 corresponds to Fc receptor II (Fc γ RII). These receptors bind antibody-antigen immune complexes, linking innate and adaptive immunity and mediating adaptive immune responses. In research, antibodies against CD16/CD32 are commonly used to block Fc receptor-mediated interactions, preventing non-specific binding of antibodies or immunoglobulin complexes to immune cells during experiments such as flow cytometry and immunohistochemistry, thereby improving experimental accuracy.

Product Data

Mouse splenocytes stained with either iF488 Anti-Mouse CD16/32 clone 2.4G2 (green histogram) or an isotype control (gray histogram).
