Background Information

C-C chemokine receptor type 7 is a protein that in humans is encoded by the CCR7 gene. CD197 is a chemokine receptor that binds CCL19 and CCL21. CCR7 is expressed on naive T cells, regulatory T cell, memory T cell, dendritic cell, mature B cell. Through regulating the homing of CD197 expressing cells into secondary lymphoid organs, it affects the interaction among these cells and thus the immune response.
