

## Anti-Mouse NK-1.1 Antibody

<b>Catalog Number:</b>	203801, 203802
<b>Size:</b>	100 ug, 500 ug
<b>Target Name:</b>	NK-1.1, CD161, NKR-P1C, NKR-P1B, Ly-55
<b>Regulatory Status:</b>	RUO

### PRODUCT DETAILS

---

<b>Clone:</b>	PK136
<b>Application:</b>	Flow Cytometry
<b>Reactivity:</b>	Mouse
<b>Format:</b>	Purified
<b>Isotype:</b>	Mouse IgG2a
<b>Antibody Type:</b>	Monoclonal
<b>Formulation:</b>	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide
<b>Protein Concentration:</b>	0.5 mg/mL
<b>Storage&amp;Handling:</b>	The antibody solution should be stored between 2°C and 8°C
<b>Isotype Control:</b>	301501

### BACKGROUND INFORMATION

---

NK-1.1, also known as CD161b/CD161c or Ly-55, is a type II transmembrane C-type lectin receptor encoded by the Klrb1 (NKR-P1) gene family in mice. It is predominantly expressed on natural killer (NK) cells and a subset of invariant NKT cells in selected mouse strains, including C57BL/6, FVB/N, and NZB. The activating isoform NKR-P1C lacks an inhibitory motif and promotes NK cell cytotoxicity, IFN- $\gamma$  production, and tumor cell lysis. NK-1.1 expression correlates with effective immune surveillance and graft rejection, making it a widely used marker for identifying and studying murine NK and NKT cell populations.
